ACEC ’08 WORKSHOP SUBMISSION
ICT in Curriculum and Pedagogical Transformation

Objectives:
To become familiar with the SMART Notebook Software and its capabilities, by using the software in a computer lab setting.
To develop the skills within SMART Notebook software to produce a lesson that can be used in a classroom.

As the world leader in interactive technology, the SMART Notebook software has the power to enhance, enrich and engage students learning.
It facilitates quality teaching and can be used to create purposeful, personalised learning.
This workshop will provide teachers with the basic skills to start using the Notebook software effectively.
When the Notebook is then used on the SMART Board, collaborative learning for students and teachers will become evident.
The SMART Board will also address the needs of the visual, auditory and kinaesthetic learners in your class.

Workshop Content:
Teachers will be provided with the opportunity to use the Notebook Software to create a lesson that can be used within their own classroom. No experience is required for attendees. They will be guided through this process step by step. Topics covered will include Touch, Write & Save as well as other features that are available in Notebook such as Area Capture, Cloning & Ink Aware.

This workshop is designed for teachers to be introduced to the Notebook software so they can create a lesson of their own. Access to a laboratory is required so all teachers have the opportunity to interact with the software. A PC lab would be ideal as well as the use of a SMARTboard set-up (this can be provided by ELECTROBOARD if required) Access to the internet will be required for basic use. The proposed duration of the workshop is one hour.

Required Software:
All PC’s will require the SMART Notebook software to be installed prior to the workshop.
SMART Notebook can be downloaded from the following link

Instructors Qualifications:
Rob Mayer is the National Product and Training Manager for ELECTROBOARD.
Rob joined ELECTROBOARD in 1998 as an Account Manager, moved on to become the State Sales Manager and now oversees the Product Management and Training Departments. A teacher by trade, Rob has had over 10 years experience with SMART Boards in education and is a SMART certified Master Trainer. Rob has a thorough knowledge of SMART Boards and the Australian interactive whiteboard market.
